Integrated
TCP/IP Data

Technical Specifications

Powered by

C2P
Convergence To Pixels

TCP/IP Data integrated seamlessly into Digifort VMS System .

Digifort is integrated with C2P (Convergence to Pixels) who are the market leader from the USA for bringing metadata from any TCP/IP enabled device into Digifort.

Having TCP/IP text associated with an event displayed side by side with the video of the same event significantly increases the utility of all technologies involved.

ASSET TRACKING

- Shipping
- Receiving
- Storage rooms
- Lab area

- Locate
- Medical
- Equipment

- Unified Security monitoring and analysis platform makes Digifort video management system(VMS) the ideal head-end.

- Determine the location of your high valued equipment immediately by using RFID assettracking devices integrated into your video surveillance system.

- All asset tracking events are time synchronized with all area surveillance video.

- Real-time onscreen Text Alert Pop-Ups with audible tones let you know when items ofinterest are leaving or entering your area.

- User defined event notification can be sent out as an Email and SMS alerts.

- Powerful Hypermedia Search Engine tool links all text received with recorded surveillance video allowing you to see when specific items have been moved and where the last locationthe item was detected.
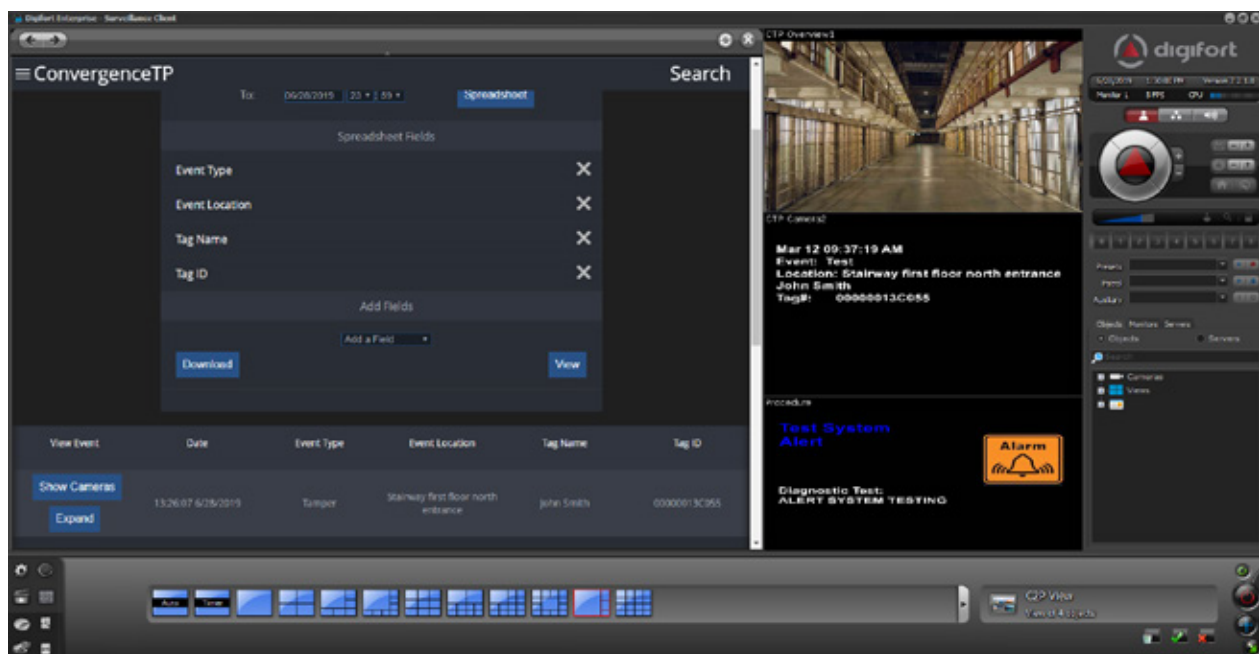

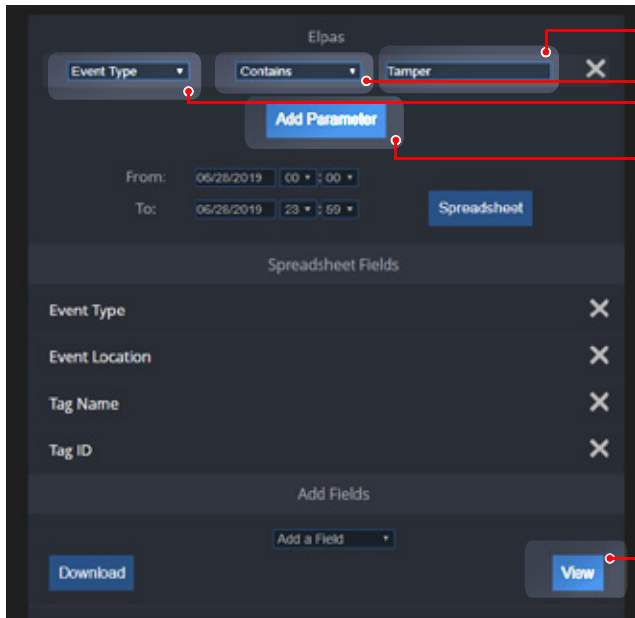

Use full or partial keywords from metadata to setup the search.

Qualify your search with equal to, not equal to, contains, etc.

Select search parameter from drop down tab.

Filter your search by adding multiple keywords.

Once your search parameters are defined select view to present results in table.
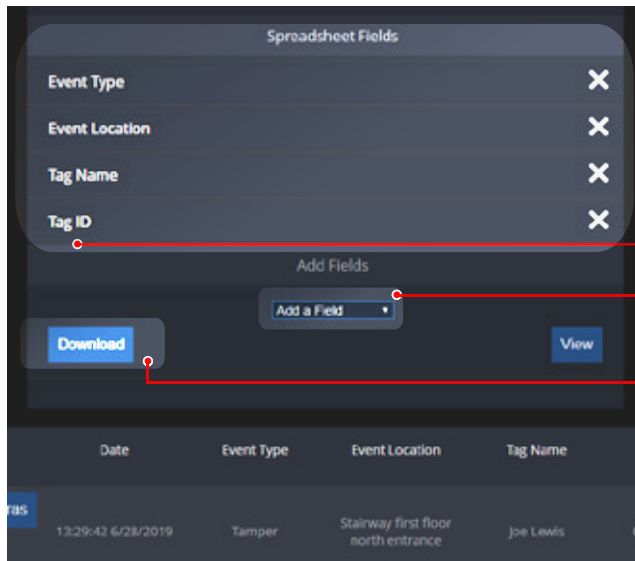

Setup your spread sheet columns using either default settings or add or delete columns.

Add new column headings to your spread sheet using drop down menu.

Select Download to export data in CSV format to a spread sheet where you can create a visual representation of the data.

- **Report Manger** provides results in spread sheet format to be used for audit investigations. Text Pop-up alerts can be enabled to activate a real time on-screen alert accompanied with an audible tone when a Rule is triggered.

Count the number of alerts detected based on your rules.

BAR CODE EVENTS INTEGRATED INTO DIGIFORT VIDEO MANAGEMENT SYSTEM

- Unified Security monitoring and analysis platform makes the Digifort video management system(VMS) the ideal head-end.

- All asset tracking events are time synchronized with your network's surveillance video.

- Real-time onscreen asset tracking activity provides pop-up alerts when user defined events occur.

- Real time charting of specific events are displayed as a camera view.

- User defined real-time event notifications can be sent as an Email and as SMS alerts.

- Powerful Hypermedia Search Engine combines multiple asset tracking parameters to quickly findspecific events and its associated video.

- Export the search engine reports as CSV files.

- Report Manger spreadsheet provides a simple one-click selection of an event bringing up detailedparameters of the event along with the associated video(s).

- Export recorded video evidence directly from the Report Manager's audit entry table.

Alert Manager add Pop-Up events to push alerts to the client in real time and have operators comments show up in the Audit table.

Report Manger provides results of audit investigations based on user defined Rules, user defined Pop-up comments and allows annotation of audit status of events.

Export spreadsheet in CSV format.

Report shows number of events captured during the time period shown in the table. Clicking on the event brings up the recorded video.

Alert

About C2P Inc. founded in 2010 with the focus on providing an easy to use VMS integration platform allowing customers to consolidate their existing security investments with their VMS system producing a unified security platform saving time, reducing costs and improving their overall security operation.
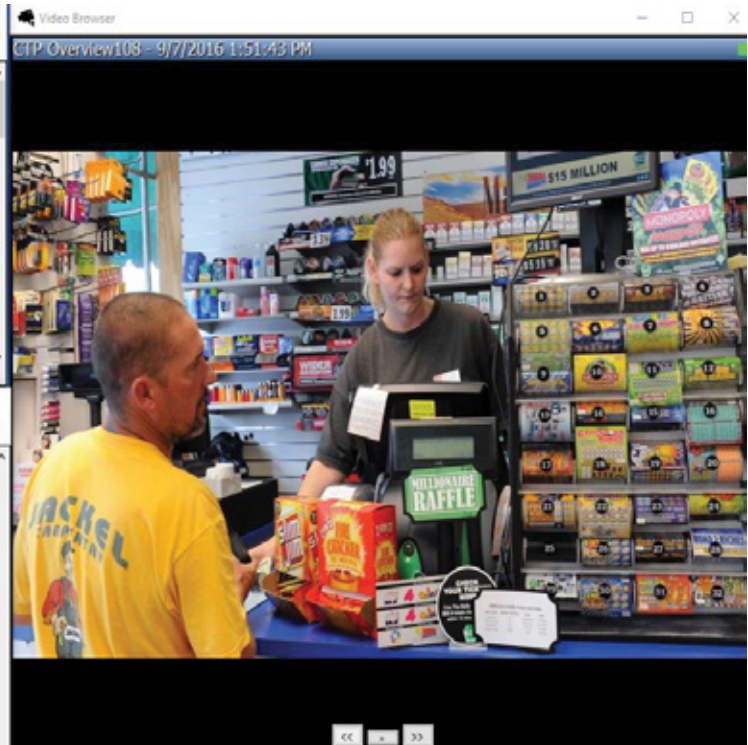

AUDIT INVESTIGATIONS POINT OF SALE

- Unified Security monitoring and analysis platform makes you VMS the ideal head-end.

- Protect company assets by detecting fraud early in its development stage through analytics.

- Zero in on vulnerabilities where potential theft can occur:
  - Line item voids, employee discounts, no sales, coupon overrides & more

- User friendly audit investigation tools allow easy setup of transaction categories

- All POS transactions are time synchronized with all VMS surveillance video.

- Easily bring up multiple camera views of an event during forensic investigations

- Monitor POS activity locally as well as from a remote site at any time.

- Powerful Hypermedia Search tool links all POS text received with all stored VMS video.

- Select events from the audit spreadsheet to view the transaction and its associated video

- Export video evidence.

Select the date and time of interest from drop down menu or just select today

Select auditing categories: No Sale, Price Override, Refund and Void

Zero in on a selected cashier operator or view all

Zero in on a selected terminals or view them all

Select a Rule from audit entry spreadsheet, noting date and time of event.

A separate Transaction table is brought up once a rule is selected, and simultaneously video from the recorder is queued up just prior to the event ready to be viewed

Select play forward and watch video while transaction table above steps thru events. It's that easy.

POINT OF SALE MONITOR TRANSACTIONS & CONDUCT AUDIT INVESTIGATIONS

- Unified Security monitoring and analysis platform makes the VMS system the ideal head-end.

- Protect company assets by detecting fraud early in its development stage throughanalytics.

- Zero in on vulnerabilities where potential theft can occur:
  oLine item voids, employee discounts, no sales, coupon overrides & more.

- User friendly audit investigation tools allow easy setup of transaction categories.

- All POS transactions are time synchronized with all VMS surveillance video.

- Easily bring up multiple camera views of an event during forensic investigations.

- Monitor POS activity locally as well as from a remote site at any time.

- Powerful Hypermedia Search tool links all POS text received with all stored VMS video.

- Select events from the audit spreadsheet to view the transaction and its associated video.

- Set status of events (miskeyed, training, theft, etc.) and export video evidence.

Use Loss Prevention Tools To Search, Find And View Events Quickly

1. Setup Auditing Rules for:
   - ■ All Transactions
   - ■ All Exception Events
     - ■ Employee Discounts
     - ■ No Sale, Refunds, Voids
     - ■ Manual Coupon Overrides
   - ■ Date and Time of interest
     - ■ Today, yesterday
     - ■ Last week , last month
   - ■ Select register number or employee ID

2. Setup Auditing Rules for:
   - ■ Click on the rule of interest
   - ■ Two events will follow
     - ■ Transaction table will appearwith event highlighted.
     - ■ Recorded video of the eventwill be queued up ready toview.

3. View your selected events:
   - ■ Click on video controls toplay video forward, reverseor pause.
   - ■ Transaction table is highlighted and incrementsas video is playing.
   - ■ Mark video as theft, validevent, training, miskeyed,etc.
   - ■ Export selected events.
